Summary

Full-stack Sr. Software Engineer at Tesla who thrives on cross-functional projects spanning many teams and disciplines. I take ownership fast and stay focused on measurable outcomes in production.

Education

Georgia Institute of Technology *Atlanta, GA*
BS in Computer Science (GPA: 4.00 / 4.00) *Aug 2021 – Dec 2024*

Experience

Tesla *Austin, TX*
Sr. Software Engineer Aug 2026 – present

- Owned product expansion for vehicle fleet management end-to-end (requirements, UX, engineering, rollout) across multiple teams managing $14M+/month in equipment, shipping rental/lease contract tracking, real-time data synchronization through Kafka, and live GPS location tracking to improve operations.
- Redesigned table partitioning and index schema using Splunk-driven usage analysis to support 20K+ new maintenance orders/day, eliminating chronic slow-query and performance issues.
- Resolved a production auth outage on a 1.2M-message/hour Kafka pipeline by replacing 20 over-provisioned pods with a TTL cache and singleflight pattern; applied Redis caching to cut a 250K-call/hour database hotspot.
- Designed and built TCP and vendor API integrations to automate parts dispensing and tracking to remove manual audits, saving ~$8 per part of labor.

Software Engineer Mar 2025 – Aug 2026

- Built full-stack features (Go, MySQL, Angular, Kafka, Kubernetes) for an internal factory platform tracking equipment maintenance and assets, used by 50,000+ people across 6 global factories.
- Brought a new ~60-location business vertical onto the platform with HR-synced user provisioning and automatic role management.
- Supported production on-call across 6 factories, triaging incidents with Splunk, Grafana, and database profiling, and managing Kafka infrastructure (topics, certificates, consumer health).
- Used AI-assisted development (Claude Code + Cursor) to build reproducible data-migration tooling and accelerate delivery across all initiatives through AI-driven coding pipelines.

Tesla *Fremont, CA*
Software Engineer Intern May 2024 – Aug 2024

- Developed features for in-house equipment maintenance software using Golang, MySQL, and Angular.
- Created Grafana dashboards to display data analytics and predict equipment failure using equipment data retrieved from a Kafka data pipeline.
- Led design/implementation of API for creating forms and workflows that were used across the company by over 20,000 people.

FlightBridge *Atlanta, GA*
Software Engineer Intern May 2022 – Aug 2022

- Continuously developed an online booking and management platform for the private aviation industry.
- Developed a tool using ASP.NET and the Google Maps API to visualize hotel data for over 1000 customers.
- Utilized SQL and LINQ in C# to build a hotel recommendation engine that increased hotel search efficiency.

Griffin Solutions Group *Alpharetta, GA*
Software Engineer Intern May 2021 – Aug 2021

- Followed an Agile development cycle to work on multiple software projects at a software solutions company.
- Used React to develop frontend features and worked with Node.js and PostgreSQL to develop API endpoints.

Certifications

Microsoft Azure Fundamentals | AZ-900 *May 2025*

Technical Skills

Languages & Frameworks: Go, TypeScript, Python, C#, SQL, Angular, Next.js, React, Node.js
Infrastructure: Git, Docker, Kubernetes, Kafka, Grafana, Azure, Splunk, MySQL, ClickHouse, PostgreSQL
